

***SALMONELLA* IN LIVESTOCK PRODUCTION 2004**

GLOSSARY

NOPT	Not phage typed.
RDNC	Reacts with the phages but does not conform to a recognised pattern of lysis.
UNTY	A culture which does not react with any of the phages in the typing scheme.
Untyped	Full information unavailable at the time of data collation.
Untypeable	A culture which is not suitable for typing.
Structure only	Some cultures may be non-motile or fail to express both flagella antigens in the case of di-phasic serotypes, and consequently cannot be named. In such cases the antigenic structure is reported or isolates are grouped as “structure only”.
Rough	Rough strains of <i>Salmonella</i> cannot be serotyped due to autoagglutination.
DT	Definitive Phage Type of <i>S. Typhimurium</i> as described by Anderson et al (1977).
PT	Phage type
U	Undesignated. A recognised phage designation with a particular pattern of lysis which has not yet been included in the typing scheme eg. U302
Cfi	Centre for Infections (previously CDSC)
